

Success story

«We expect that Dr.Web AV-Desk will make our users more loyal».

Dmitry Malov. Corbina Telecom Vice president

A solid green horizontal bar.

Corbina Telecom is one of four largest ISP companies in Russia (www.corbina.ru), One of the greatest concerns of the company is information security of its customers and viral activities in its networks. *«Nowadays many users are not computer-educated. Being a communication services provider company, we are committed to provide reliable protection of information stored on computers of our customers. Corbina Telecom has become the first ISP that added an anti-virus protection service to its list of free extra services»*, — says Alexander Malis, Corbina Telecom CEO.

In November 2007 Dr.Web AV-Desk service was installed on servers of Corbina Telecom. Technical specialists of Doctor Web, Ltd. assisted in deployment of the infrastructure of an anti-virus network and provided consulting to Corbina Telecom staff during a test deployment period.

A deserved victory

A provider company has to know which anti-virus is installed on computers of its customers because it is the only way to ensure security of their information.

*«About 10 anti-virus products participated the tender. Dr.Web Anti-virus met several imported criteria including **ease of use for an ordinary user, reliability and fast scanning speed**»*, — Dmitry Malov, the vice president of Corbina Telecom comments.

Dr.Web AV-Desk — is an investment in your own business and the significant rise of profits

Dr.Web anti-virus is a service that is in high demand on the market, it allows a provider company keeping its customers and significantly increase their number.

«First of all, our customers will be sure that a subscription from Corbina Telecom provides them the fastest and now the safest connection to the Internet. For many people this will become the main reason to choose a company that provides such security», — says Dmitry Malov, the vice president of Corbina Telecom.

Dr.Web AV-Desk decreases a number of Internet threats and provider support service workload.

A provider is a primary target of virus attacks.

Every day a provider faces a threat from thousands of malicious programmes. They have to solve malware related issues but they are not experts.

«Our data says that about 20-25 % of all home computers are infected., — Dmitry Malov, the vice president of Corbina Telecom comments — So about a quarter of the total number of computers may be zombies controlled by a malefactor. We realize that it imposes a huge threat to the Russian Internet segment. So we feel our commitment to do something lower the level of threat».

Solving problems caused by malware takes time and money and requires experience a provider doesn't have. What shall a provider company do?

Leave protection job to the professionals!

Using Dr.Web AV-Desk providers may deliver an entire package of services to protect PCs from viruses and spam to an unlimited number of subscribers.

«Corbina Telecom has over 350 000 subscribers,— Dmitry Malov, the vice president of the company says. — Most of them are professionals of their industries but they are not IT-experts. That's why their computers are always in danger of being attacked from the Internet which nowadays is flooded with viruses and Trojans. Corbina Telecom needed a solution that would give all its customers a reliable protection from virus attacks».
